UK Dental Specialists
at Chiswell Green

CBCT Scanning X-ray

Fast state-of-the-art dental imaging

UK Dental Specialists are one of the only dental practices in South East England with our own 3D Cone Beam CT scanner. We offer the most advanced independent scanning centre and service available in the area.

The reaction from our referring dentists when we announced that we had invested in the Orthophos SL CBCT scanner was very positive and we welcome referrals from any local dentists who would like a CBCT scan of their patient.

Cone beam CT scans offer benefits to you and your patients across the following areas:

Dental Implants

The quality of CBCT scans allow you to plan and place dental implants much more accurately, offering you benefits in diagnosis through to treatment and post-operation examinations.

Endodontics

Cone beam images are clear and accurate, allowing for improved diagnosis and treatment.

Impaction

CBCT gives you a precise 3D view of impacted molars within the alveolar bone, showing their position in regards to adjacent teeth and proximity to vital structures such as the nerve canal, sinus walls, and cortical borders.

Minor oral surgery service

Analysis

Cone Beam CT assists you in both detecting and evaluating possible problems for your patients, thanks to accurate measurements of bone and jaw deformities.

This allows you to assess bone lesions and changes of the jaw and detect cysts, tumours and disease.

Airway assessment

Restricted airways are obviously susceptible to collapse

but are not always easy to spot. Cone Beam data enhances airway assessment, allowing you to reconsider your treatment plan if a problem is found.

After your patient has been scanned, we provide the scan to you on a disc or DICOM file along with instructions on viewing and working with the scan.

OPG service

We are able to offer an OPG (Orthopantomogram) service to give you a panoramic view of the jaw and teeth.

The scan can provide information on wisdom teeth, bone loss, orthodontic assessment, jaw trauma, dental pain, or be used as part of a general dental check-up.

We are also able to provide a full radiologist's report to our patients with the scan.

We provide:

- ✓ Low dose CBCT scanning
- ✓ Fast turnaround
- ✓ Free planning software
- ✓ Support and follow-up
- ✓ Outstanding patient experience

How much does it all cost?

Fees corrected as of June 2023

CBCT	£110
OPG	£70
Radiologist report	£135

3 convenient ways to arrange your scan

- ✓ Patient online booking
- ✓ Walk in service
- ✓ Over the phone
